

MAMMOTHS AND MASTODONS AND GIANT SLOTHS. OH MY!

SNOWMASS ICE AGE DISCOVERY

Did you know that Snowmass is the site of the largest ice age fossil discovery in the world? More than 150,000 years ago, glaciers covered the area that would become Snowmass Village. In 2010, a bulldozer operator working in Snowmass unearthed the fossilized remains of a young Columbian mammoth! Soon after, scientists uncovered an entire fossilized ecosystem.

To celebrate this incredible discovery, Snowmass has installed various art installations around the Village. Want to dig deeper? Complete the full Ice Age Passport Walk by visiting different art and informational exhibits around the Village. To learn more about the discovery and the Passport Walk, visit SnowmassIceAge.com/Visit.
